

Job Title: Programmer-analyst (2nd level) – Development

Xceed is looking for a person who enjoys challenges who possesses a spirit as creative as technical. Our company, in full expansion, develops its own software (WPF, JavaScript, .Net “components”) distributed on the five continents. Founded in the mid-90's, Xceed has retained a *start-up in a garage* atmosphere, but with the ability to deliver world-class finished products to its customers and partners, mainly of the Fortune-500 type. At Xceed We encourage diversity: the more different we are, the more valuable our life experience can be, the more fun we'll have!

Job description:

- Participate in our new JavaScript/TypeScript project.
- Participate in the development, analysis, design, and development of the different features & functions requested for the company's products
- Perform tests on the products to ensure quality standards
- Diagnose and, if necessary, solve problems (“bugs”) reported by customers, or identified during tests
- Provide 2nd level support to customers when support requests exceed the technical level of 1st level support or when requested by the current supervisor
- Offer direct support to customers with direct access to developers (when required)
- Perform any other related tasks required for the marketing of the products, such as the preparation of source code for the compilation of installers, the preparation of the products for on-line presentation and delivery, the description of new features and product changes, as well as writing or supporting the technical writing of documentation, etc.
- To carry out a technology watch on trend-based technologies according to demand
- Accomplish short-term implementation mandates at some of our clients’ locations
- Must be able to perform other tasks usually performed by colleagues, if called upon to do so
- Must be available to attend training classes/courses in connection with related tasks
- Participate in pre-sales efforts if required (evaluations, analyses, estimates.)
- May be asked to dispense some IT consulting services
- Accomplish short-term implementation mandates at customer premises
- Some travelling may be required from time to time

Qualifications/ Required skills:

A minimum of 2 years in JavaScript/typescript

A minimum of 3 years of experience in programming and analysis
